Gridics is dedicated to building real estate professional analytical applications for the urban environment. Gridics aggregates data from various sources, including MLS sale and rental listings, news, recorded sales, property records, zoning, traffic counts, transit, recorded mortgages, recorded liens, demographics, and more, into a seamlessly unified platform. The team provides a wide variety of ways to manipulate, organize, and distill that data into easily exportable formats. Gridics is the source for accurate, transparent, and independent real estate news, data, and analysis for South Florida.

Platform: Drupal 7

Challenges:

- old low-quality code;
- slow facet ranges out of the box (we have around 20/25 filters/facets per page. We implemented fast Ajax demon to warm up the search);
- integration with postGIS (we are storing a lot of GEO info in WKT format there);
- effective image processing (we are getting 100K per day);
- commerce integration with Stripe (it was required to configure recurring payments);
- building a shell script for a 5-minute automatic deployment process.

Requirements:

- fast indexing data with Apache Solr via multi-threading;
- data import from CSV, Excel, MDB, Shape files;
- Open Trip Planner integration;
- custom tiles implementation for Mapbox;
- custom PDF report generation;
- superfast search filters and facets;
- SSO integration;
- API data layer implementation.

Invotra's (<https://www.invotra.com/>) digital workspace enhances productivity and efficiencies through people, content and things (IoT). Their enterprise intranet platform is central to the employee engagement, internal communications and digital transformation strategies for large organisations. Built using robust open-source technologies — including Drupal CMS — it's able to provide a flexible backbone to any large organisation that has to cope with the rapid change in organisational culture, business applications and strategy. Delivered as SaaS, the responsive service team take away the hassle of maintaining, upgrading and supporting the application.

Platform: Drupal 7

Challenges: Creating a system for tracking, adding & changing tickets using comments. Creating a private comments system. Only the users who have specific roles can see private comments. Custom AJAX filter for views which looks like folder trees. Landing page for the group content type. Using custom AJAX form to add/edit/approve/remove comments and replies, custom view handler to add like/unlike. Creating custom events and rules for the notification system.

Requirements:

- ticket tracking system
- private comments
- tree taxonomy filter for views
- notification system

JYSK is an international retail chain that sells 'everything for the home'. It was founded in 1979, and now JYSK GROUP has more than 2,400 stores, 20,000 employees across 44 countries, and an annual turnover of EUR 2.9 billion. Its website (<http://jysk.com/>) has a separate domain for each shop, and every domain provides the customers with the same opportunities. Customers can review the product catalog, choose any product using the convenient filters and purchase them online.

Challenges: JYSK requested a representative website with domains for all the stores and integration with their commerce system.

Platform: Drupal 7

Requirements:

- click-and-collect feature;
- geolocation;
- multidomain;
- flexible payment process;
- WSS integration.

Maryland Global University (<http://mdgu.us/>) aspires to be a true global university, recognized for its professional development and academic programs by preparing students for the current challenges by combining research and discovery. MGU focuses on developing and delivering professional development courses in various disciplines and academic programs.

It offers professional courses that can be taken in different ways: on-ground, online, blended, and as self-study.

The most prominent features provided with help of Drupal for this project are: ecommerce functionality for buying the courses online integration with Moodle — a famous LMS (learning management system) for online education.

Drupal and Moodle come together in a perfect alliance to serve the website's main mission: enabling people to get education in a way that is most convenient for them.

Platform (technologies): D7, Moodle

Challenges: The main challenge was to integrate Drupal and Moodle. Drupal kept and managed users, managed content of the site. Moodle enabled access to courses themselves.

Requirements: robust integration with Drupal and Moodle, possibility to sell courses online.

Centrica (<http://centrica.com>) is an energy and services company. The company's focus is a long-term growth in five areas:

- energy supply
- energy services
- distributed energy and power
- the connected home
- energy marketing and trading
- exploration and production

Platform: Drupal 7

Challenges: The main challenge was to create a powerful custom CMS platform inside Drupal. It allowed users not only to manage content on the site, but to configure page layout, create content tiles, reuse them on many site's pages.

Requirements:

- responsive layout
- possibility to create content tiles
- possibility to reuse content tiles on other pages
- implementing the multi-step workflow for publishing content on the site
- allowing users to reuse media content from media library on the site

Dairex (dairex.com) is an international online platform that offers the most simple and cost-efficient ways to sell, buy, and transport dairy products. Its mission is to help clients grow their dairy network where they can find partners, get the freshest offers and the most transparent prices. The website provides the opportunity for dairy market participants to find each other's offers from all corners of Europe. The buy and sell deals are made at closed auctions, and the delivery deals by means of open tenders.

Platform: Drupal 7

Challenges: it had to be a website where users could start auctions for selling and buying milk products, provide detailed specification of every product, discuss agreements using on-site messaging and chatting systems, and hire haulers for transporting products from one place to another.

Requirements:

- auctions and tenders;
- user roles;
- user profiles;
- on-site notifications;
- private messages and chat.

AttendingDR is a Professional Medical Association comprised of physicians, medical societies, administrators, and executives of healthcare organizations throughout the US. This platform enables both physicians and administrators to fulfill their daily tasks, manage group or association members, exchange patient referrals through a robust Patient Referral System, access the Career Center with over 6,000 physician jobs, access the On-Call Schedule for on-the-go changes, send critical announcements to proprietary networks, etc. Currently 30,000 physicians are participating within the AttendingDR network.

Platform: Drupal 7

Challenges: AttendingDR had to appear a light, handy network for doctors on one hand and a helpful site with doctors' practical advice for patients on the other hand.

Requirements

- quick site response;
- social network features for doctors;
- providing real doctors' answers to patients.

B-F.A.S.T (Belgian First Aid and Support Team, <http://b-fast.be/>) is a permanent structure created by the Federal Government of Belgium that can be mobilized at any time to assist a country or countries affected by a man-made or natural disaster.

The strategic operational framework of B-F.A.S.T implies making Belgian capacity available to other states, if these states make a request and are facing an unexpected emergency situation that exceeds their proper capabilities. The flexibility, the interdisciplinary character as well as the fast response time are determining for the B-F.A.S.T structure.

Platform (technologies): Drupal 6 — Drupal 7 migration, PHP, HTML, CSS, jQuery, Apache SOLR, Vagrant, Docker

Challenges: Website migration from Drupal 6 to Drupal 7 preserving the initial structure and functionality with minor differences, improving the original architecture.

Requirements:

- migrating the content types, blocks, views, content;
- multilanguage, multidomain functionality;
- custom code elimination in accordance with OpenFed distribution migration rules and standards;
- responsive theming.

The General Directorate Crisis Centre (<http://centredecrise.be/fr>) is the federal 24-hour service. It can continuously collect, analyze and spread the necessary information about the political and executive authorities.

The Crisis Centre also offers its infrastructure, interdepartmental management expertise and the coordination of national-level crises.

Platform (technologies): Drupal 6 — Drupal 7 migration, PHP, HTML, CSS, jQuery, Apache SOLR, Vagrant, Docker

Challenges: website migration from Drupal 6 to Drupal 7 preserving the initial structure and functionality with minor differences, improving the original architecture.

Requirements:

- migrating the content types, blocks, views, content
- multilanguage, multidomain functionality
- custom code elimination in accordance with OpenFed distribution migration rules and standards
- responsive theming

NEWS | NOVEMBER 17, 2016
Ruthie DAVIS X DESIGNOW
Designow Studio

Designow (<https://www.designow.com/>) is a community for discovering, developing and promoting design talents worldwide. It brings together emerging designers, fashion lovers and industry experts to create a virtual studio.

Designers are able to openly share their works, vote for their favorite designs, including their own, get feedback from studio members to grow professionally, earn royalties on winning designs, join the Product Development Program. Art lovers can discover up-and-coming designers and support their work by pre-ordering their designs with good discounts.

Platform: Drupal 7

Challenges: The site had to provide custom workflow for design life-cycle — the challenge, the crowdfunding stage (if a design won it) and store (if design got enough funding). There had to be several different types of challenges. Users were able to vote for designs, like and dislike them, follow other users. Users could support other users on site by giving them special tokens (stars).

Requirements:

- responsive layout
- design lifecycle implementation
- payment gateway integration
- social network elements

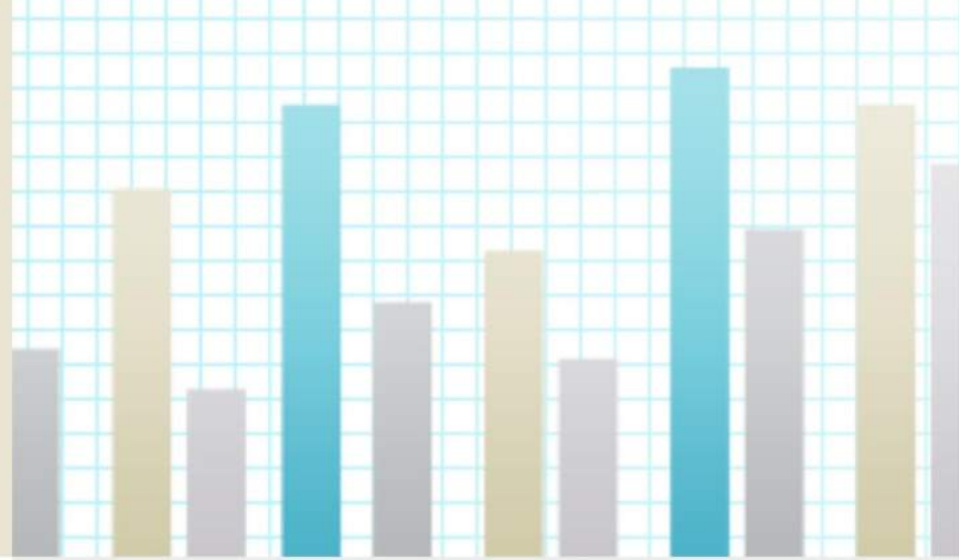

“A good kebab is more than just a meat sandwich. It is love.” That’s the philosophy of Doener Charts! The team wants to share this passion with other people and assist them in finding the best kebab restaurant in their city. So Doener Charts (<http://doenercharts.de/>) is the most useful place to find perfect kebab, as well as other many other Turkish dishes. Customers can evaluate each Döner kebab restaurant. Clear rankings help make a choice. Users get bonuses for their reviews and can exchange them for discounts.

Platform (technologies):

Drupal 7, Apache Solr, Mapbox, CSS/HTML

Requirements:

- Apache Solr integration
- geoLocation via HTML5
- mobile theme

National Accounts Institute of Belgium (<http://inr-icn.fgov.be/fr>) combines three institutions: the National Institute of Statistics, National Bank of Belgium and the Federal Planning Bureau. With the cooperation of the three institutions, the Institute is responsible for economic analysis, forecasts, and statistics.

On its website, you will find all the necessary information about the Institute, its mission and structure, as well as activity reports, publications, links to the relevant national and European establishments, and lots of downloadable docs.

The site is available in French and Dutch.

Platform (technologies): Drupal 6 — Drupal 7 migration, PHP, HTML, CSS, jQuery, Apache SOLR, Vagrant, Docker.

Challenges: Website migration from Drupal 6 to Drupal 7 preserving the initial structure and functionality with minor differences, improving the original architecture.

Requirements:

- migrating the content types, blocks, views, content
- multilanguage, multidomain functionality
- custom code elimination according to OpenFed distribution migration rules and standards
- responsive theming

Scholar Practitioner Journals (<http://scholarpractitionerjournals.com/>) is a subscription-based service for the publication of peer-reviewed research works in journals. It offers a collection of broad-based publisher of peer-reviewed open access journals in various disciplines including art and humanities, engineering, medical science, social sciences, biological sciences, physical sciences and others. These journals give scholar-practitioners the access to the latest research findings, ongoing research, and concept papers.

Scholar-practitioner Journals aspire to be a true global peer-reviewed journal hosting platform and a meeting place for researchers, professionals, students, and other to exchange ideas to meet the challenges of today's world.

Platform (technologies): Drupal 7 — CSS/HTML

Challenges: We have created a possibility to host different types of journals and their publications.

The Coast Guard is responsible for the cooperation between the partners authorised for the North Sea. The Belgian part of the North Sea occupies 3600 km² and is also known as Belgium's eleventh province.

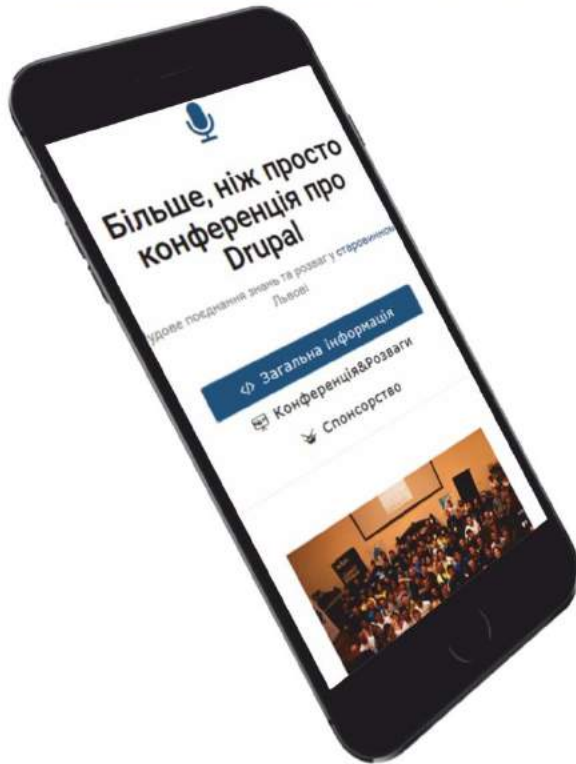

No less than 17 governmental institutions (both regional and federal) plus the province of West-Flanders are authorised for all these activities. The main responsibility of the Coast Guard is to ensure a good cooperation between all these partners so as to increase the efficiency of operations at sea. The <http://kustwacht.be/en> website is made in 3 languages: English, French and Dutch.

Platform (technologies): Drupal 6 — Drupal 7 migration, PHP, HTML, CSS, jQuery, Apache SOLR, Vagrant, Docker

Challenges: website migration from Drupal 6 to Drupal 7 preserving the initial structure and functionality with minor differences, improving the original architecture.

Requirements:

- migration of content types, blocks, views, content
- multilanguage, multidomain functionality
- elimination of custom code, sticking to OpenFed distribution migration rules and standards
- responsive theming

Lviv Euro Drupal Camp is an annual event, one of the biggest Drupal Camps in Ukraine. Drupalers from across the country and even from abroad come to discuss Drupal, listen to interesting speeches, make new friends and have a great time in Lviv.

In 2016, Lviv Euro DrupalCamp has a very nice anniversary. It's the 5th year the event has been there! The camp happened for the first time in 2012 and gathered about 60 participants. But it has been growing and, on September 3-4, 2016, it has gathered 250 guests, which means a 4-time increase!

Platform: Drupal 7

Challenges: The official site for [Lviv Euro Drupalcamp](#) 2016 was created to promote the event, give coverage to it, let users buy tickets with various price options, or become sponsors.

Meego® (<http://mymeego.com>) is the best tool for teachers, parents and students. They can share the fun of learning in all multimedia formats. Students and teachers upload and organize artifacts and create high-quality portfolios for parents to view and share. With an intense focus on advancing the use of technology to improve the teacher-student-parent relationship, the team of ProfolioED, LLC believes that student achievement and engagement will increase and negative school climate characteristics like bullying will reduce thanks to Meego™.

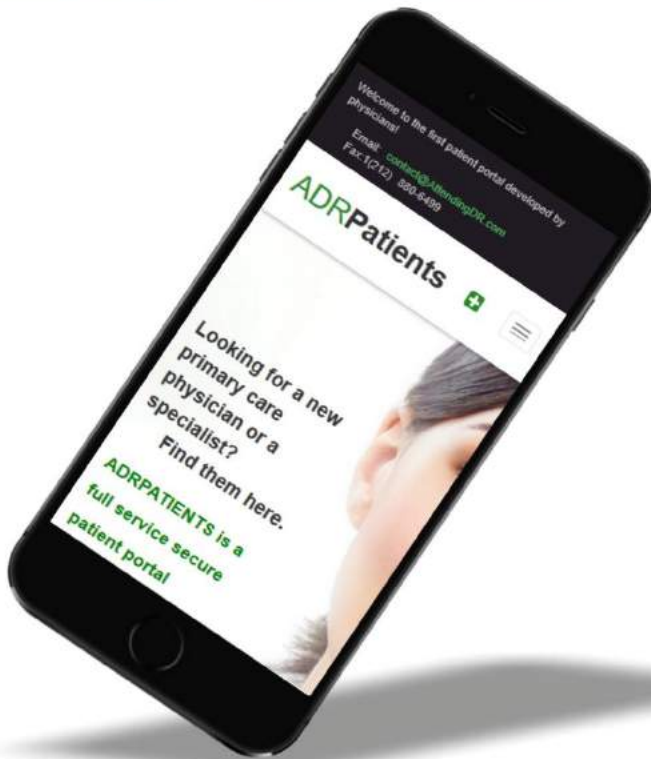

Platform (technologies): D7, Integration with PayPal, Subscriptions, Dynamic Portfolio Builder using Panopoly, Organic Groups, Artifact Sharing (custom).

Challenges: The site had to provide flexible functionality for creating schools, classes, and projects, managing teachers and students inside them. Users needed to be able to upload artifacts and portfolios for boasting their works and share them to other users.

Requirements:

- flexible school/class/project management
- flexible user management
- ability to create portfolios from library of artifacts

ADRPatients (<https://www.adrpatients.com/>) is a full-service secure patient portal providing patients with online appointments, medical document storage with e-signature, and medical information from doctors. Due to integration with the doctors' portal (<https://www.attendingdr.com/>), the ADRPatients portal helps patients find doctors and helps doctors provide health information to their patients.

Platform: Drupal 7

Challenges:

Schedule editing in real time. Managers can edit schedule and see changes of any in real time mode. After some content / user / taxonomy is being created on one site, it is automatically duplicated on another one so that synchronization is reached. Functionality aiming to integrate two sites (shared messaging system, scheduling functionality, document e-subscription system).

Requirements:

- management of schedules
- synchronisation between two sites
- electronic signature

Life should be filled with movement, comfort, and freedom. That's the credo of DePuy Synthes. The team has been working to create orthopaedic ways to overcome joint challenges for more than 40 years.

On the <https://reallifepformance.com.au/> website, anyone can check out the stories of people who overcame their knee and hip pain, discover detail about treatment options, learn more about replacement surgery and the journey surrounding it, as well as see educational materials and news on the latest developments in knee and hip replacement.

Platform: Drupal 7

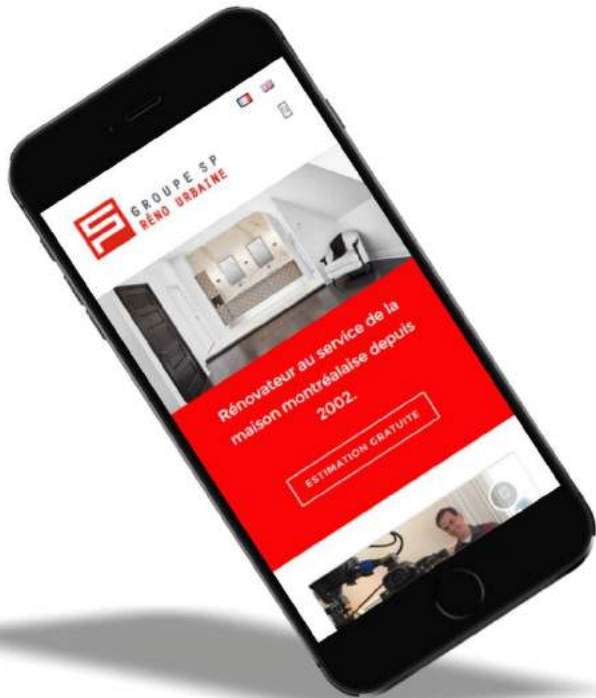

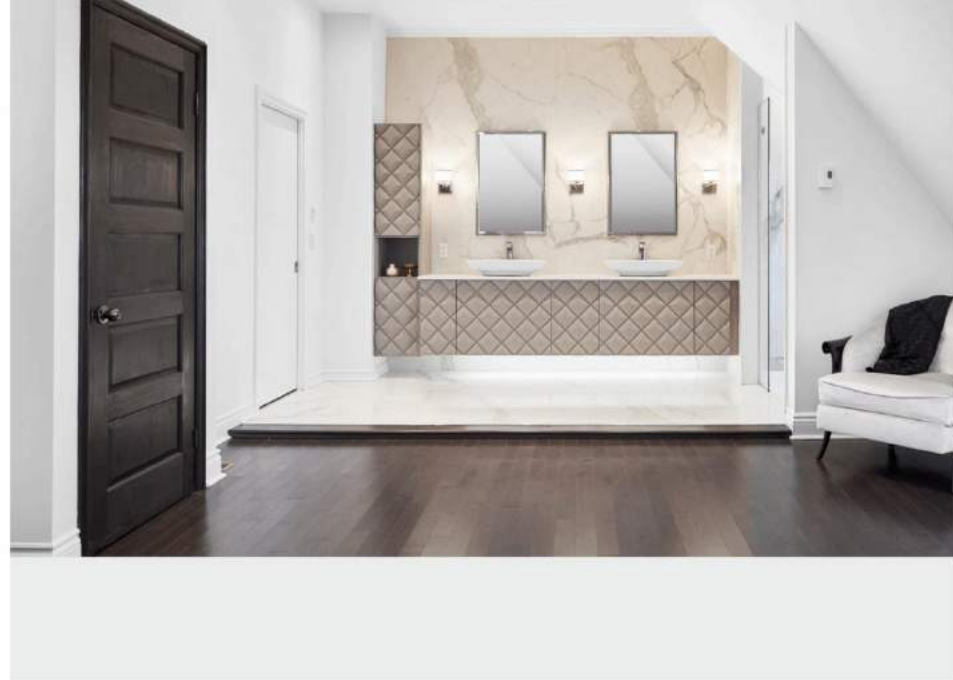

Challenges:

Here are some of the changes we accepted once we started project:

- it was necessary to track user progress activity based on tasks in surgery they completed;
- it was required to create text Zoom +/- options and make sure theming would be ok.

Requirements:

- responsive theming;
- user progress tracking based on tasks the need to do.

Groupe SP Reno Urbaine (<http://www.reno-urbaine.com/en>) is recognized as the leader in residential renovation in Montreal. They contribute to progress in the industry through their innovations and unique working methods. Groupe SP Reno-Urbaine is specialized in the following remodeling services:

- interior design
- complete remodeling
- kitchen renovation
- bathroom renovation
- basement renovation.

Platform: Drupal 8

Challenge:

The biggest challenge here was to keep the system simple and provide an easy way to edit the content. Another challenge was that we had a WP theme and it was a strict rule to do 100% the same theming in Drupal.

Requirements:

It was the first site we built and put to live in Drupal 8.

Vidso is a project which helps HRs find employees via video interviews. All you need is to create an interview with questions, add rating criteria and ask candidates to record their interviews. It is especially convenient for international companies which look for employees worldwide. Interviews are recorded directly from the candidate's webcam and stored on the site. Users are unable to upload their own video files. However, candidates can record test videos and report technical problems if anything is wrong with the recording process. No tricks — you see candidates as they are.

Platform (technologies): Drupal 7, PHP, SASS, CSS, JS, jQuery, HTML, Xdebug, Map

Challenges: Vidso had to be a reliable platform any employer could trust in the process of choosing the best staff with no geographical limits.

Requirements:

- Video recording specifics uses Flash and HTML5 as an experimental feature.
- Depicting points on the map and popups by clicking on geom.

Implementation of search by distance.

- Setting roles and permissions, creating "rooms" for conversations.
- Site theming and support.

WeCanHelp (<http://wecanhelp.be/en>) is a refugees platform collecting offers from citizens, companies and associations wishing to offer help or receive it. All these offers are centralized on a single portal to ensure an easy access for refugees and associations.

The supporters of this project are motivated by humanistic values. The WeCanHelp site helps promote pragmatic solutions to issues related to refugee integration, regardless of political, ideological or religious ties.

The ads about help can be easily submitted. They are sorted by various criteria. The site is presented in 3 languages: English, French and Dutch. Moreover, the Google autotranslate feature enables to read the site in more than 10 other languages.

Platform (technologies): Drupal 7, PHP, HTML, CSS, jQuery

Challenges:

Multilanguage functionality.

User offices for different site roles.

Content moderation.

Requirements:

- After registration users can leave suggestions about the help they can provide to refugees.
- Registered users have profile pages where they can edit, delete or create suggestions, edit their personal data.
- Suggestions can be filtered by language or category.
- Unregistered users (refugees) can send private messages to people who have left suggestions directly using the site form.
- The site is multilingual, it uses Drupal multilingual functionality and a Google translate widget. It is mobile-friendly.

Yawave (<https://yawave.com/>) is a project for goal reaching starting from finding a job and up to fundraising without any limits. You just need to start your wave, launch it through your network and monitor its progress. With the objective in mind, participants decide who they select as next recipient of the wave. Referrals are based on participants' brains and hearts and therefore go beyond traditional segmentation. Each wave type means its own actions, but you need to apply Yawave's unique toolbox to set targets anyway.

Platform (technologies): Drupal7, React.js, Node.js, D3.js

Challenges:

Stripe / Quaderno integration

RESTful third-party service integrations (with Java)

D3.js for referral tree visualisation

Wave Builder

Referral system of information spreading via social networks and email contacts

Requirements:

- responsive design;
- Java server integration;
- wide design customization opportunities for content authors;
- multiple languages.

This is the official website of District Administrative Court in Volyn region (Ukraine):

<http://vloas.gov.ua/>.

This website's functionality allows for:

- learning more about the Court by checking out the history, structure, statistics, as well as photos
- finding useful instructions as to applying to court, and downloading important document samples
- displaying the names of judges and their working hours
- accessing the necessary law cases and checking the National Registry
- reading ads, news, job listings and more.
